

JOHNSON COUNTY, IOWA — FLORA UPDATE

AARON K. BASTEN
5160 160th St. N.E.
Solon, Iowa

ABSTRACT

The vascular plants in Johnson County, Iowa, were inventoried during a 6-year project (2018–2024) involving field work and study of previous records. Many records are vouchered, but some are not. Vouchers are primarily in herbaria and unvouchered records are from published and unpublished field work descriptions of the flora for specific regions or properties. Trustworthy and competent individuals made these latter lists, and they may include photographs, but they lack the credibility offered by vouchers. The total number of species known from the county is 1113. Reported here are 175 species new to Johnson County and 42 species that apparently are no longer present.

Thorne (1955, 1956) made a comprehensive flora list for Johnson County. Significant additions to the pteridophytes were made by Peck et al. (1997). The current report adds 175 vascular plant taxa known from the county.

Area of study

All of Johnson County is included in the study. Thorne's 1955 descriptions and observations have served as the primary base for the current updates and observations.

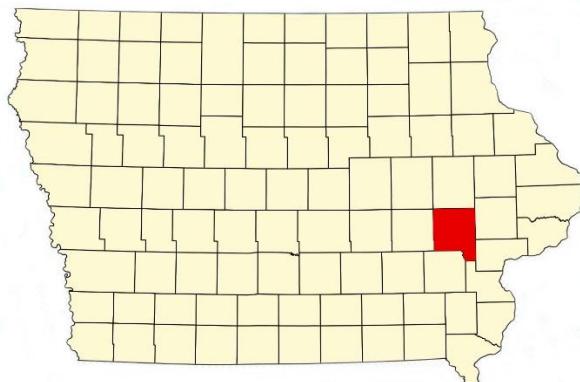

Figure 1. Location of Johnson County, Iowa.

Land preservation in parks, wildlife areas, and wildlife management areas is an active issue in Johnson County. Organizations such as the Johnson County Conservation Board (JCCB), the Bur Oak Land Trust, and the Iowa City Parks Department lead the way toward preservation and restoration with active land acquisition and management. One main reason for these acquisitions has been the presence of remnants with a rich native flora. Thus, many recent collections and reports of new plants have been from public property.

A large source of land preservation is the thousands of federally owned acres managed by the U.S. Army Corps of Engineers (USACE). Dam construction on the Iowa River started in 1949 and was completed in 1958, flooding bottomlands with the Coralville Reservoir. This large land acquisition also involved upland woods and alluvial plains that are undisturbed, other than rental agreements for croplands and food plots for wildlife. However, periodic inundation of the bottomlands and non-native invasion has undoubtedly altered the vegetation there.

The Iowa Department of Natural Resources (IDNR) also has substantial public land holdings including Lake Macbride State Park, Hanging Rock Ridge, Hawkeye, Redbird Farms, and Swan Lake Wildlife Management Areas .

Few areas in Johnson County are in their natural state. However, agencies have preserved and restored areas, with the vast majority since 1955. With their public access and with studies done before and after acquisition, these preserves have contributed a substantial proportion of the new collections. Prominent areas of collecting since 1955 have been in the northern half of the county, particularly in areas of alluvial and windblown sand deposits, in woodlands formally known as the Big Grove, and in wetlands and sedge meadows. These areas are unsuited for row crop agriculture, but generations of owners have pastured them.

Ciha Fen Preserve, owned by the JCCB, is located on a 3-mile-long windblown sand deposit along the east side of the Cedar River in Cedar Township. Approximately 40 acres of the preserve are uncultivated except for pasture and still have remnant sand savanna, sand prairie, and upland wetlands. Upland wetlands are very uncommon in Johnson County, particularly in sand deposits. Two ponds are fens, one of which has a floating sedge mat and is a nutrient poor fen. This general area has threatened and endangered plants for Iowa.

Cedar River Crossing is mostly alluvial bottomland along the Cedar River in Cedar Township and owned by the JCCB. The north end of the property is sandy and has remnant sandy prairie areas. Restoration efforts are ongoing to restore the historical wetland characteristics of the area while preserving the sand prairies that are on a slightly higher elevation.

Hawkeye Wildlife Management Area, managed by the IDNR, is in northeastern Oxford Township. This area is alluvial sand with upland areas and dunes. Studies of ornate box turtles for 30 years in this area have also generated interest in vegetation. Wetlands and ponds offer added habitat for uncommon flora.

Sand Prairie is a nature reserve owned by Iowa City and is within the southern city limits. It is a highly disturbed upland sand deposit with a small pond. It still holds interesting and unique species for Johnson County.

Williams Prairie State Preserve is managed by the JCCB, which is southwest of Hawkeye Wildlife Management Area. Botanists have studied this area for over 70 years. It is a wet and species rich sedge meadow. It also has higher sandy ground.

Malinda Reif Reilly Fen and Prairie is a property in Big Grove Township newly bought by the JCCB in 2020. A sizable portion of the property is an old pasture that has never had chemicals applied. An intact sedge meadow exists on a south facing slope — intact sedge meadows are few in Johnson County and offer unique botanical sites.

Sugar Bottom Recreation Area and the **Macbride Nature Recreation Area** are notable for their orchid species.

Turkey Creek Preserve, managed by the Bur Oak Land Trust, is in Newport Township. Limestone bluffs along Turkey Creek have been popular for botanical collectors since the early 1900's. The University of Iowa uses an area near the mouth of Turkey Creek for botanical research.

Big Grove Preserve in Newport Township, managed by the Bur Oak Land Trust, is a very representative Big Grove woodland site. Upland woods in the Big Grove stretch from Iowa City to Lake Macbride State Park in Newport and Big Grove Townships. Small streams have eroded this land into steep ravines with the uplands cropped and the ravines pastured. Developers are subdividing it into residential housing. Fortunately, government and private agencies are preserving large areas. The USACE manages large tracts of Big Grove landscape as part of the Coralville Reservoir watershed. All of this is available for public access.

Kent Park in Oxford Township, managed by the JCCB, has been another popular site for collectors. It is hilly and was pastured prior to acquisition as a park. Initially, as a park, JCCB intensely planted it to conifers and other species non-native to Johnson County. In recent years JCCB has opened areas with timber removal for prairie restoration and plantings. Sizable areas have recovered their original native prairie plants by timber and successional tree and brush removal, and burning, without having to reseed.

Other scattered areas of Johnson County have contributed to new species, but the above-mentioned areas have clusters of new species. Railroad tracks have traditionally harbored vegetation colonized by native plants from adjacent areas, but since the advent of herbicides in the 1960s they are now largely tracts of ‘weeds.’ Shimek made many of his collections along railroads and Thorne and Sorensen made collections along railroads into the 1960s. Trespass laws now limit access along working railroad beds, even if a natural area exists. There are public bicycle and hiking trails using abandoned rail lines that still might offer possible new plant discoveries. Other potential search sites would be private properties in the Big Grove Timber area and all around the Coralville Reservoir.

Extensive surveys of vegetation were conducted along at least 26 rural roadways from 2002 to 2011. While there are efforts to manage these roadways for habitat, they are subject to disturbance through mowing, spraying, and excavation to clear the ditches, which makes them low probability sites for the practical preservation of species.

Other than some areas of Kent Park, and disregarding sand and wet prairies, there are no extensive native mesic prairie areas left in Johnson County.

Materials and methods

Additions to the Johnson County flora incorporate inventories of natural areas, mostly for roadside and natural area preservation. Inventory lists for these areas are by organizations such as Bur Oak Land Trust (formerly Johnson County Heritage Trust), Iowa City Parks and Recreation, and the Johnson County Conservation Board, as well as private notes and lists. In addition, added vouchers for Johnson County flora are in herbaria across the country.

Dozens of plant inventory lists from Johnson County were obtained by internet search and from agencies such as the Johnson County Conservation Board, the Bur Oak Land Trust, and the Iowa City Parks Division. Personal contacts contributed individual accounts and lists of specimens to investigate. The plant inventories provided (Thorne 1953, 1955, 1956; Peck et al. 1997) have been valuable in finding those species that were once present. Thorne primarily relied upon the University of Iowa and Iowa State University Herbaria (now combined at the Ada Hayden Herbarium at Iowa State University (ISC)) for his collections. Deborah Lewis at ISC provided a list that had at least one herbarium specimen of each of the species from Johnson County that they have on file. Other herbaria with digitized collections for online use were helpful. Internet searches, communications with curators, and visits to additional herbaria in Iowa found records for Johnson County, in Appendix A.

Inventory lists included misidentified species, clerical errors, outdated binomial nomenclature, and species completely out of their known range. Old field notes, particularly by Shimek, were vague about locations. Field workers did not always collect vouchers for their finds. Even herbaria collections presented problems in identification by having new determinations that conflicted with Thorne's original list.

Floristic data have been augmented by professional and amateur botanists with the Iowa Department of Natural Resources, the Johnson County Conservation Department, various curators of

herbaria, and academics from colleges and universities. Landowners were supportive, offering suggestions and ideas and taking part in field trips. Internet searches were invaluable.

Vouchers collected by the author and others are deposited at ISC. The author did not collect certain species because he considered the populations to be too small, threatened, or endangered.

Appendix A is the list of species added since 1955 and includes species already added (*Thorne 1956; Peck et al. 1997*) for the purpose of unification in this report. Appendix B is a list of previously vouchered species without recent records.

Vouchers with missing data and questionable identification are noted in Appendices A and B. Thorne mentioned species that have been annotated since 1955 with different identification — they are in this report with the more recent names.

This report omits specific locational data to protect sensitive species. Most recent collections have GPS coordinates in their voucher labels. Older collections have varying degrees of precision of locational data that are often vague or even missing. These data are available at the appropriate herbaria. The author did not find certain species reported but not previously collected in Johnson County. They may no longer exist there or else are rare.

STATISTICAL SUMMARY OF THE FLORA

Species	Native	Naturalized	Genera
Pteridophytes	29	0	20
Conifers	1	0	1
Dicotyledons	645	153	374
Monocotyledons	252	33	111
Total	927	186	506

Total number of families represented: 116

Families represented by 15 or more species:

Asteraceae	139	Ranunculaceae	28
Poaceae	111	Scrophulariaceae	26
Cyperaceae	90	Liliaceae	24
Fabaceae	48	Apiaceae	22
Rosaceae	45	Caryophyllaceae	21
Brassicaceae	39	Orchidaceae	19
Lamiaceae	36	Salicaceae	17
Polygoniaceae	31	Euphorbiaceae	15

Genera represented by 8 or more species:

Carex	62	Viola	10
Symphytum	17	Chenopodium	9
Polygonum	15	Galium	9
Salix	13	Muhlenbergia	8
Aclepias	12	Rumex	8
Solidago	11	Cyperus	8
Helianthus	10	Eleocharis	8
Euphorbia	10		

Quercus

10

Loss of species

This study has identified species previously reported in Johnson County, but not recently collected, included in recent inventory lists, or seen in all the hundreds of field hours spent searching for species new to the county. There are also species that collectors have misidentified and vouchered that have been redetermined by others. Appendix B lists these plants. Notably, most are not on the current state list for special concern, threatened, or endangered plants. The disappearance of these species might be due to habitat loss, changes in farming practices, herbicide usage, or housing developments, but evidence is not clear.

Appendix B lists the missing species with citations of their herbaria and former locations, and particularly their dates of collection in Johnson County. These are the only records for each of the species in Johnson County. All but two of these records are prior to 1927, and a good share of them are from the 1800's. The two more recent records were for *Platanthera leucophaea* from 1960 and 1973. Botanists have searched for these species without success since 1973.

The author searched herbaria for the presence of these species in surrounding counties during the last 75 years — Benton, Iowa, Jones, Linn, Louisa, Muscatine, and Washington counties (counties and recorded date appear in parenthesis at the end of the proper binomial in Appendix B). As shown in Appendix B there is scant evidence in the past 40 years for the presence of the missing species in the surrounding counties.

Appendix C is a complete list for the county that includes all the species from Thorne (1955), Thorne (1956), Peck *et al.* (1997) and Appendix A and B.

ACKNOWLEDGEMENTS

Mark Leoschke first encouraged me to undertake this study and continued to support me with information about his collections, potential locations, field trips, help in identifications, and editing this report. Thomas Rosburg and Mark Widrlechner were particularly helpful with difficult identifications. Deborah Lewis, Curator of the Ada Hayden Herbarium, spent hours aiding in researching vouchers and helped with identification of specimens. Larry Gullet allowed special permission to access and collect specimens on all Johnson County parks and preserves. Richard Lutz deserves special mention for keeping me safe by going with me on field trips and for his help in finding and identifying specimens. In addition, I thank dozens of other individuals for granting access to private property and their help in finding and identifying specimens.

APPENDIX B

Previously vouchered plants without recent records that have disappeared or were mis-identified in Johnson County. Herbaria searches identified their presence in any of the surrounding counties during the last 75 years. Those counties and recorded date appear in parenthesis at the end of the appropriate binomial. The surrounding counties include Benton, Iowa, Jones, Linn, Louisa, Muscatine, and Washington.

Agalinis auriculata (Michx.)

Shimek 8-7-1926 106278 (University of Colorado Herbarium)

Shimek 9-27-1931 3689 (Grinnell College Herbarium)

Thorne 9-22-1956 44451 (R.K. Godfrey Herbarium, Florida State University)

In 2018 Marisa B. Szubryt (SUI) decided that all the collections of *E. graminifolia* from Johnson County at the Ada Hayden Herbarium are *E. gymnospermoides*. In addition, all other vouchers for *E. graminifolia* are in northern Iowa. Given this information, the above-mentioned vouchers should be reviewed using current identification criteria (see further information in Appendix A under *E. gymnospermoides*). It is likely that *E. graminifolia* was never present in Johnson Co.

Hill 5-18-1880 16383 (IA) Collected as *V. cordifolia* Michx. - unknown determination as *V. vulpina*.

Also, found in alluvial bottomlands of River Junction, Freemont Township, Johnson County, May 9, 1902, by unknown author (possibly B. Shimek) of field notes. Field notes erased and written over by an unknown person.
 (Muscatine 1950, 1955, Cedar 2024)

APPENDIX C

Johnson County vascular plant flora. This list includes all the plants from Thorne (1955), Thorne (1956), Peck et al. (1997) and Appendix A. Plants from Appendix B are included even though they seem to be currently missing from the county. Family, genus, and species names have been updated to more modern nomenclature using FNA and the Grasses of Iowa as a basis for reference. Plant names in capital letters are introduced species.

Potentilla recta L.
Potentilla rivalis Nutt.
Potentilla simplex Michx.
Prunus americana Marsh.
Prunus hortulana L.H. Bailey
Prunus pensylvanica L. f.
Prunus serotina Ehrh.
Prunus tomentosa Thunb.
Prunus virginiana L.
PYRUS COMMUNIS L.
Pyrus ioensis (Alph. Wood) Britton
Rosa arkansana var. *suffulta* (Greene) Cockerell
Rosa blanda Ait.
Rosa carolina L.
ROSA EGLANTERIA L.
Rosa multiflora Thunb.
Rosa setigera Michx.
Rosa tomentosa Sm.
Rubus allegheniensis Porter
Rubus flagellaris Willd.
Rubus heterophyllus Willd
Rubus occidentalis L.
Rubus satis L.H. Bailey
Spiraea alba Du Roi

Rubiaceae

Cephalanthus occidentalis L.
Galium aparine L.
Galium asprellum Michx.
Galium boreale L.
Galium circaeans Michx.
Galium concinnum T. & G.
Galium obtusum Bigel.
Galium tinctorium L.
Galium trifidum L.
Galium triflorum Michx.
Houstonia minima Beck

Rutaceae

Ptelea trifoliata L.
Zanthoxylum americanum Mill.

Salicaceae

POPULUS ALBA L.
Populus deltoides Marsh.
Populus grandidentata Michx.
Populus tremuloides Michx.

SALIX ALBA L.

Salix amygdaloides Andersson
Salix candida Flugge
Salix discolor Muhl.
Salix exiqua Nuttall
SALIX FRAGILIS L.
Salix humilis Marsh.
Salix nigra Marsh.
Salix petiolaris Sm.
Salix rigida Muhl.
Salix sericea Marsh.
Salix x rubens Schrank
Salix x sepucralis Simonk.

Santalaceae

Comandra umbellata (L.) Nutt.

Sapindaceae

Acer ginnala Maxim.

Saxifragaceae

Heuchera richardsonii R. Br.
Mitella diphylla L.
Micranthes pensylvanica (L.) Haw.
Ribes americanum Mill.
Ribes cynosbati L.
Ribes missouriense Nutt.
Penthorum sedoides L.

Scrophulariaceae

Agalinis purpurea (L.) Pennell
Agalinis tenuifolia (Vahl.) Raf.
Aureolaria grandiflora (Benth.) Pennell
Castilleja coccinea (L.) Spreng.
Chaenorrhinum minus (L.) Lange
Chelone glabra L.
Dasistoma macrophylla (Nutt.) Raf.
Gratiola neglecta Torr.
LINARIA VULGARIS Hill
Lindernia dubia (L.)
Mimulus ringens L.
Pedicularis canadensis L.
Pedicularis lanceolata Michx.
Penstemon digitalis Nutt.
Penstemon grandiflorus Nutt.
Scrophularia lanceolata Pursh
Scrophularia marilandica L.
Tomanthera auriculata (Michx.) Raf.
VERBASCUM BLATTARIA L.
VERBASCUM PHLOMOIDES L.
VERBASCUM THAPSUS L.

VERONICA ANAGALLIS-AQUATICA L.

VERONICA ARVENSIS L.

Veronica peregrina L.

VERONICA PERSICA Poir.

Veronicastrum virginicum (L.) Farw.

Simaroubaceae

Ailanthus altissima (Mill.) Swingle

Smilacaceae

Smilax illinoensis Mangaly

Solanaceae

DATURA STRAMONIUM L.

LYCIUM BARBARUM L.

Physalis heterophylla Ness

Physalis longifolia Nutt.

Physalis pubescens var. integrifolia (Dunal) Waterf.

Physalis virginiana Mill.

SOLANUM AMERICANUM Mill.

SOLANUM CAROLINENSE L.

SOLANUM DULCAMARA L.

SOLANUM PSEUDOCAPSICUM L.

SOLANUM ROSTRATUM Dunal.

Staphyleaceae

Staphylea trifolia L.

Thymelaeaceae

Dirca palustris L.

Tiliaceae

Tilia americana L.

Ulmaceae

Celtis occidentalis L.

Ulmus americana L.

ULMUS PUMILA L.

Ulmus rubra Muhl.

Urticaceae

Boehmeria cylindrica (L.) Sw.

Laportea canadensis (L.) Wedd.

Parietaria pensylvanica Muhl.

Pilea fontana (Lunell) Rydb.

Pilea pumila (L.) Gray

Urtica dioica L. var. procera (Muhl.) Wedd.

Valerianacea

Valerianella radiata (L.) Dufr.

Verbenaceae

- Phyla lanceolata* (Michx.) Greene
Verbena bracteata Lag. & Rodr.
Verbena hastata L.
Verbena simplex Lehm.
Verbena stricta Vent.
Verbena urticifolia L.

Violaceae

- Viola lanceolata* L.
Viola missouriensis Greene
Viola nephrophylla Greene
Viola papilionacea Pursh
Viola pedata L.
Viola pedatifida G. Don
Viola pubescens Ait.
Viola sagittata Ait.
Viola sororia Willd.
Viola striata Aiton

Vitaceae

- Parthenocissus quinquefolia* (L.) Planch.
Parthenocissus vitacea (Knerr) Hitchc.
Vitis riparia Michx.
Vitis vulpina L.

Zygophyllaceae

- TRIBULUS TERRESTRIS L.

ANGIOSPERMS: MONOCOTYLEDONS**Acoraceae**

- Acorus americanus* (Raf.) Raf.

Alismataceae

- Alisma subcordatum* Raf.
Echinodorus berteroii (Spreng.) Fassett
Sagittaria cuneata Sheldon
Sagittaria brevirostra Mack. & Bush
Sagittaria graminea Michx.
Sagittaria montevidensis Cham. & Schlecht.
Sagittaria rigida Pursh

Araceae

- ACORUS CALAMUS L.
Arisaema dracontium (L.) Schott
Arisaema triphyllum (L.) Schott

Commelinaceae

- COMMELINA COMMUNIS L.
Tradescantia bracteata
Tradescantia ohiensis Raf.

Cyperaceae

- Carex albursina* Sheldon
Carex alopecoidea Tuck.
Carex annectens Bickn.
Carex atherodes Spreng.
Carex bebbii Olney
Carex bicknellii Britt.
Carex blanda Dew.
Carex brevior (Dew.) Mack.
